José Juan Pérez González

FULL STACK DEVELOPER | PHP/SYMFONY · NODE.JS · REACT/NEXT.JS

Spain · Remote · Open to hybrid 619 673 966 pepeju95@gmail.com jjpg.dev github.com/jjpg95 linkedin.com/in/jjpg95

PROFESSIONAL PROFILE

Full stack developer with **nearly 5 years of experience** in **PHP/Symfony**, **Node.js** and **React/Next.js**. Most recently: a recurring partner billing engine, SEPA collections with GoCardless and internal accounting libraries. Before that, on a product with over 1M monthly visits: fixed-deadline deliveries (accounting export to Sage 50, GA4 migration in 2 months), backend integration with GraphQL, OpenSearch and RabbitMQ queues, and React frontend work in multi-team projects. Testing comes as standard: on the frontend I took coverage from 0% to over 75%.

PROFESSIONAL EXPERIENCE

Full Stack Developer | **Grupie Labs** **December 2025 – October 2026**

- Core product development in **PHP/Symfony** and **Next.js/React**.
- Designed and implemented the **recurring billing engine for partners**: daily contract cycle, prorating of cancellations and failure recovery.
- Backend services for external clients built with **Fastify** and **PostgreSQL**.
- Helped integrate the **Lemonway** payment gateway (wallets, direct debits, webhooks and KYC) and integrated **GoCardless** to automate SEPA collections.
- Built event RSVP end to end and, for the rest of the events feature, the frontend: editor and public page, guest list, survey model and en/es/fr internationalization.
- Created two internal libraries: *media-url* (images via imgproxy) and *ledgers* (accounting and invoicing with Holded integration).
- In the frontend projects, which had no tests, I established testing practice and took coverage **from 0% to over 75%**; I also built the e2e suite with **Playwright** from scratch.
- AI-assisted development workflows with layered verification: automated review by an independent agent, manual review and team code review before merging.

Software Engineer (full-stack) | **The Knot Worldwide** (formerly Zankyou Weddings) **November 2022 – November 2025**

Product serving **1M+ monthly visits across 10+ countries***, within a* **40+ person engineering organization** *and a team of 6 to 10.*

- In a multi-team project with a very tight deadline, I took charge of the web part: I added to another team's **React** application a new route with its page, reusable components and custom hooks, following the project's conventions.
- Designed and implemented part of the backend integration of a **cross-team project** (**HapiJS**, **GraphQL** and **OpenSearch** over an index of **millions of documents**). In an architecture of **8+ services** communicating through **RabbitMQ** queues, I added listeners with their endpoints and schemas, and created GraphQL resolvers in **PayloadCMS**.
- Developed features behind feature flags and validated them with A/B experiments in the company's in-house experiment manager.
- Planned and carried out the **Universal Analytics to GA4** migration against Google's hard deadline, in **2 months** and with no loss of business reporting continuity.
- Automated B2B/B2C accounting exports to **Sage 50**, removing **10+ hours of manual work per month** and the data-loading errors.

Full Stack Developer | **Tigloo** **December 2021 – October 2022**

- Proposed and implemented the company's first **GitLab CI/CD** pipeline, replacing a manual deploy that meant repeating the change by hand across **4 machines from 4 simultaneous terminals**.
- Maintenance and evolution of applications for a music rights company in **PHP 5.4/5.5 and 7.4** with Symfony and AngularJS.
- Designed, developed and put into production, on my own, an endpoint for receiving third-party music consumption data, with short-lived token authentication.

TECHNICAL STACK

Frontend	React · Next.js · TypeScript · React Admin · Tailwind CSS · HTML5/CSS3
Backend	PHP 8.3 / Symfony / API Platform · Node.js (Fastify, HapiJS) · PayloadCMS
Data	PostgreSQL · MySQL · OpenSearch / Elasticsearch · Prisma
Architecture	Distributed and event-driven architectures · RabbitMQ · GraphQL · REST
Quality	Vitest · Jest · Testing Library · PHPUnit · Playwright · Code review · Pair programming
Tooling	Git · GitLab CI/CD · Docker · Claude Code / Claude API

PROJECTS

- **Nexfit** — SaaS for personal trainers and their clients, **in production with real users**: trainer web panel (Next.js), API (NestJS, Prisma, PostgreSQL) and client app (Expo/React Native) with offline-first sessions, **published on the App Store and Google Play** (personal project).
- **Accounting Suite** — Accounting app for small businesses. NestJS, PostgreSQL, Next.js (personal project). **Live public demo**, read-only with synthetic data.
- **Curio** — Gamified learning platform for children aged 3 to 14: coding, maths and science through interactive lessons, a code editor and level-based progression. Next.js, PostgreSQL, Prisma, Zustand. **Live public demo.**
- **Vereda** — Multi-tenant SaaS for sports event organizers. Next.js, PostgreSQL.

EDUCATION & METHODOLOGIES

- **Web Application Development** (1,500-hour course, DAW curriculum) — CEAC, 2021.
- **Methodologies:** Scrum, Kanban, pair programming, systematic code review, AI-assisted development.
- **Languages:** Spanish native · English B1.
